DESCRIPTORS: *Titanium alloys, *Aluminum alloys, *Heat resistant metals and alloys, *Creep, Mechanical properties

Titanium alloys of composition approximating to Ti₆Al are shown to have outstanding creep strength at temperatures up to 700°C, being superior to austenitic steels. The results can be explained theoretically.

A PROBLEM CONCERNING THE Ni_3Cr COMPOUND.

Rough draft trans. of Akademiya Nauk SSSR. Doklady,
1954, v. 95, no. 3, p. 543-545.

An investigation of a solid Ni solution of the Ni-Cr system and of Ni_3Cr formation was made with microstructural analysis, electric resistance, dilatometry, X-ray and phase-analysis methods. Results indicate that Ni_3Cr formation occurs slowly from the solid solution at 460° , and agrees with the general concept of the greatest conversion rate in an alloy corresponding to stoichiometric composition and the rate decrease by excess addition.
